(54) DISPLAY DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To solve the problem that it is necessary to provide another display in a rear side in order to view display from the rear side of a panel part, because the display can be viewed only from a front side in a display provided in a panel part of conventional electronic instrument.

SOLUTION: A penetration window 4a is formed in a turning panel part 4, and a transmission type display 11 is provided in the penetration window 4a. In this transmission type display 11, a front substrate 12, a rear substrate 13 and both of electrodes 14 and 15 are transparent, and the display contents can be viewed from both of front and rear sides of the turning plane part 4. Because the display can be viewed from both of the front and rear sides on one display 11, the turning panel part 4 can be made to be thin and light in weight.
